## Senior Noise Engineer/Scientist Guelph, Ontario

**RWDI AIR Inc.**, part of the RWDI Group of Companies, specializes in resolving air quality, noise and vibration, climate change, hydrogeological as well as waste management issues for a wide array of industrial, commercial and government clients. With locations and 100+ people strategically positioned throughout Canada, we have worked closely with many different sectors for approximately 40 years to meet measurement, modelling, mitigation and regulatory compliance needs.

We are seeking an energetic individual to join our Guelph office as a **senior level engineer or scientist** on our Environmental Noise team.

The successful candidate will demonstrate a good fit with the following position description and qualifications.

- Within our project team structure, a senior level engineer/scientist provides technical guidance to project management and the technical team members who are completing the technical aspects of a project and preparing reports.
- This position involves client solution consultation and providing technical mentorship in areas such as data collection, field measurement, numerical analysis, and reporting.
- The consulting and team environments demand good verbal and excellent written communication skills.
- The analytical, mathematical and computational basis needed is typically covered by a degree in Engineering or Physical Sciences complemented by a minimum of **7 to 10 years** of diverse technical experience in environmental and industrial noise.
- A strong ability to understand and explain the relationship between real-life observation and representation in drawings or models is fundamental to the work.
- Our dynamic consulting environment ensures that each engineer/scientist works on many project teams simultaneously.
- Guiding each project towards successful completion requires the senior level engineer/scientist to have initiative, self-organization, and advanced problem-solving skills while maintaining awareness of the financial implications of technical decisions.
- Senior staff are expected to assist with preparation of proposals, marketing materials and/or technical papers.
- They are also asked to provide input to team technical development and budget as well as recommendations on transactions of staff.
- Microsoft Word proficiency and an excellent working knowledge of computation in Excel are needed. Advanced ability with noise-specific modelling software such as Cadna A is desirable.
- Field work and client meetings will require flexibility to travel for single or multi-day trips to industrial or similar facilities within Ontario.

This is an opportunity for a person with in-depth experience and well-developed teamwork skills to provide mentorship to young and dynamic teams.
