

BAP Acoustics Ltd. - Acoustic Consultant

BAP Acoustics Ltd. is a recently formed acoustic consultancy located in Port Moody, British Columbia. We provide services to Greater Vancouver, BC and further afield. The company consists of the two founding directors Mark Gaudet and Eric de Santis, and is affiliated with the acoustics department of the UK architecture firm Bickerdike Allen Partners.

We are looking for an acoustic consultant with two to five years experience to join our team. Because we are a new and small consultancy, there is an opportunity to help shape the direction the company takes, and for considerable career development. Our current workload includes large and small building acoustic projects and noise impact assessment work.

Experience in building acoustics is essential; experience in environmental acoustics would be advantageous. Expertise with noise propagation prediction software packages such as CadnaA, or room acoustic modeling software such as Odeon or CATT would be of benefit. Familiarity with Sketch-up or Revit would also be a bonus.

Candidates should have a degree level qualification in science or engineering with a significant level of acoustics-based content. Excellent written and spoken English skills are required.

We can offer:

- A competitive salary and benefits package
- A friendly and informal working environment
- An opportunity to help development the reputation and direction of the company

Please apply in writing with Curriculum Vitae to:
